

**I can collect analyse statistics and other information in order to draw clear conclusions about locations.**

**Task A:** Using the internet, find out the relevant statistics about Egypt and Greece to complete the table.

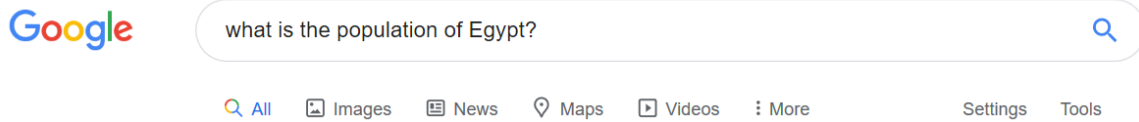

Figure 1 An example of how to search

<b>Statistics</b>	<b>Egypt</b>	<b>Greece</b>
<b><u>Population</u></b> (How many people live in the country?)		
<b><u>Life Expectancy</u></b> (How many years do people who live there live for?).		
<b><u>Land Size</u></b> (How big is the country?)		
<b><u>Size of Capital</u></b> (How big is the capital city?)		
<b><u>Density</u></b> (How much land is used?)		
<b><u>Temperature</u></b> (What is the average temperature?)		
<b><u>Gross national income</u></b> (How much money does the country make each year?)		
<b><u>Birth Rate</u></b> (How many children does each mother have on average?)		

**Task B:** Using the information you have just collected, answer the following questions

1. Which country has a bigger population?
2. Which country is bigger?
3. Which country has a larger national income?
4. Which country is warmer?
5. Which country has a larger birth rate?

**Beat the Challenge**

What other conclusions can you make?
