

Science Task Week 2 – 30.03.2020

Well done for your research last week!

As you now know, Darwin's research told us how animals adapt to their environments. Although these adaptations are not voluntary and are gradual, all animals have adapted in some way to their environments.

Your task is to research different adaptations that animals have undergone in order survive in their environment. Then:

- Choose one of the environments below.
- Design an animal (this can be completely made up or a mix of all different animals) and identify ways in which your animal is adapted to their environment.

Polar regions

Deserts

Coniferous forests

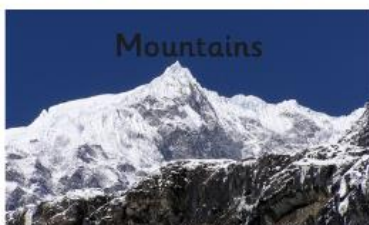

Tropical Rainforests

Oceans

Grasslands

Mountains

Heath

Design Your Own Creature

<p>Where does your creature live? Is it hot or cold? Dry or wet?</p>		<p>What does it eat?</p>
<p>Is it a predator or prey? Does it have clever ways of hunting or keeping safe?</p>	<p>Draw your creature here.</p>	<p>Does it have skin, feathers or scales? Why?</p>
		<p>How does your creature move? Wings? Legs?</p>

Template

(You don't have to use this, but it might help you to get started)

Example

This is an activity that Miss Rendell did while she was training!
(She takes no credit for the drawing, as lots of you know, her drawings are rubbish).
